DGfS Tagung 2013, Potsdam

13. 3. 2013

Outline

- i. Valency Alternations
- ii. Data
- iii. Visualizations
- iv. Summary

Valency Alternations

- valency alternations have been **studied** and described comprehensively **for some individual languages**
- **no** real attempt has been made to perform a **large-scale cross-linguistic study**
- our current project collects comparable data for valency patterns and alternations in **30 diverse languages worldwide**
- in our presentation today, detailed data on alternations from 11 languages is used

Project languages (for basemap)

L's with more detailed alternation data

Data collection

Verb form: **haruka** | Mark: Checked by editor | **FIBAI** | Checked by hiwis | Completeness check: ?

Coding pattern: **AP obj[P].sbj[A].V** | Schema: **(Basic) Coding frame** | Last modified: 19/12/2012 | By: Brad | Account: Brad | Created: 5/05/2010 | By: ren

Examples: 27 | Count: new

| new | Ex. # | Analyzed text | Gloss |
|--------------------|-------|---------------------------------|---------------|
| select remove go 1 | 1 | wa'naja hi->'uqanaga hi-hj- | blanket-POS |
| select remove go 2 | 2 | waaruc-ra hanagc wa- | table-DEF all |
| select remove go 3 | 3 | waaruc-ra wa-ha-hj-ra-gi- | table-DEF O |
| select remove go 4 | 4 | hajjira waipereci wa-hi-haruka- | wood-DEF C |

Basic coding frame's microroles

| Microrole | Index # | Coding set | Argument type |
|------------------|---------|-----------------|---------------|
| go coverer | 1 | select go act.V | select go A |
| go covered thing | 2 | select go und.V | select go P |
| go | | select go | select go |

Examples of coding frame for this verb

| new | Ex. # | Analyzed text | Gloss |
|----------------------|-------|---------------------------|---------------|
| select remove go 2 | 2 | waaruc-ra hanagc wa- | table-DEF all |
| select remove go 742 | 742 | jaagu'u waipereci hi->'u- | why canvas |
| select remove go | | | |

Microrole reference portal

| Microrole | (re)populate MR ref portal... | Index # |
|-----------------------------|-------------------------------|---------|
| go remove coverer | A Original role | 1 |
| go remove covered thing | P Original role | 2 |
| go remove cover-beneficiary | New role | 4 |
| go remove cover | X Original role | 5 |
| go remove cover causer | New role | 6 |

Derived coding frames' microroles

| Coding frame | Microrole | Index # | Argument type |
|-----------------------------------|----------------------|---------|-----------------|
| go 907 6 1 2 und[2].und[1].act[6] | go covered thing | 2 | select go und.V |
| go 907 6 1 2 und[2].und[1].act[6] | go coverer | 1 | select go und.V |
| go 907 6 1 2 und[2].und[1].act[6] | go cover causer | 6 | select go act.V |
| go 908 1 2 4 und[4].und[2].act[1] | go covered thing | 2 | select go und.V |
| go 908 1 2 4 und[4].und[2].act[1] | go coverer | 1 | select go act.V |
| go 908 1 2 4 und[4].und[2].act[1] | go cover-beneficiary | 4 | select go und.V |

Alternations: 25 | Count: 12

| new | Alternation name | (re)populate list | Alternation occurs | Comments (re: n'th occurs) | Derived coding frame | Ex. # | Translation | No. of examples |
|---------------------|--------------------------------------|---|--------------------|-------------------------------|-----------------------------------|-------|-----------------------------|-----------------|
| select remove go 01 | possessive reflexive (+Ara) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go | 11 | Did you cover your toys? | 2 |
| select remove go 02 | benefactive/possession of U (+gi) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 908 1 2 4 und[4].und[2].act[1] | 3 | Can you cover the tables? | 2 |
| select remove go 03 | instrumental applicative (+A) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 329 1 2 5 und[5].und[2].act[1] | 1 | Can you cover me with that? | 5 |
| select remove go 04 | locative applicative I (superessive) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | already part of the verb stem | go | | | 0 |
| select remove go 05 | locative applicative I (inessive) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | slot filled, no replacement | go | | | 0 |
| select remove go 06 | reflexive (+Aii) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 981 1/2 act[1/2].Vrflrcp | 744 | I covered myself with a | 1 |
| select remove go 07 | reciprocal (+Aii) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 981 1/2 act[1/2].Vrflrcp | 9 | Let's cover each other with | 2 |
| select remove go 08 | resultative alternation | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 09 | facilitative alternation | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 10 | detransitive / slot filler (wa-) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 11 | permissive causative (gip) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 907 6 1 2 und[2].und[1].act[6] | 1306 | They let me cover the logs. | 1 |
| select remove go 12 | coercive/default causative (Aii) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 907 6 1 2 und[2].und[1].act[6] | 1367 | They made me cover the | 1 |
| select remove go 13 | possessive reflexive causative | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 907 6 1 2 und[2].und[1].act[6] | 753 | Hiru made her son cover | 2 |
| select remove go 14 | reflexive causative (Aii) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go 990 6/1 2 und[2].act[6/1] | 1368 | I made myself cover the | 1 |
| select remove go 15 | superessive & possessive | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 16 | superessive & benefactive (+Aa +) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 17 | superessive & reflexive/reciprocal | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 18 | inessive & possessive reflexive (+) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 19 | inessive & benefactive (+Ao + gi) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 20 | inessive & reflexive (+Ao + Aii) | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |
| select remove go 21 | instrumental & possessive | <input type="radio"/> Regularly <input checked="" type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | old fashioned | go | 8 | I covered myself with a | 2 |
| select remove go 22 | instrumental & benefactive (+Ai +) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go | 743 | Did you cover all my logs? | 1 |
| select remove go 23 | instrumental & reflexive (+Ai + Aii) | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go | 7 | I covered myself with a | 4 |
| select remove go 24 | reflexive & possessive reflexive | <input checked="" type="radio"/> Regularly <input type="radio"/> Marginally <input type="radio"/> Never <input type="radio"/> No data | go | | go | 8 | I covered myself with a | 3 |
| select remove go 25 | resultative & causative | <input type="radio"/> Regularly <input type="radio"/> Marginally <input checked="" type="radio"/> Never <input type="radio"/> No data | go | | go | | | 0 |

Data

- counterparts ('translations') from 35 languages for **70 verb meanings** (conceived of as representative of the verbal lexicon)
- one primary valency frame (**coding frame**) and all possible alternative valency frames (**derived coding frames**) for each counterpart
- coding frames include information on argument coding (flags & indexes)
- arguments are assigned to **microroles** ('verb-specific roles') and **coding sets**

Example from German

Meaning Label: EAT

Verb form: *essen*

Coding frame: 1-nom V.sbj[1] 2-acc

Microroles: EATER(1) EATEN THING(2)

Coding Sets: nom & V.sbj acc

Example: *Das Kind isst den Apfel.*

Alternation 1: Passive: ✓ (*Der Apfel wurde (von dem Kind) gegessen.*)

Derived Frame: 2-nom passV'.sbj[2]

Coding Set: nom & V.sbj

Alternation 2: Object Omission: ✓ (*Das Kind isst.*)

Derived Frame: 1-nom V'.sbj[1]

Coding Set: nom & V.sbj

Alternation 3: *be-* Applicative: ✗ (**Das Kind be-isst den Apfel.*)

Alternations and Alternants

Alternation → relation between two alternants

- e.g. Causative:

1 V (1 runs) → 3 1 V' (3 causes 1 to run)

1 V 2 (1 breaks 2) → 3 1 V' 2 (3 causes 1 to break 2)

- **Alternants** (a.k.a Diatheses or Voices)
- Alternants can consist more than one coding frame (a.k.a. subcategorization frame)

Comparative and L specific concepts

Comparative Concepts:

- microroles (EATER, HITTER, LIKER, RUNNER, ...)
- verb meanings (EAT, HIT, LIKE, RUN, ...)

Language Specific Concepts:

- coding frames (1-nom 2-acc V.sbj[1], ...)
- coding set (nom, acc, sbj.V, obj.V, *viđ&acc...*)
- alternant (“voice”) (set of coding frames)

Visualization

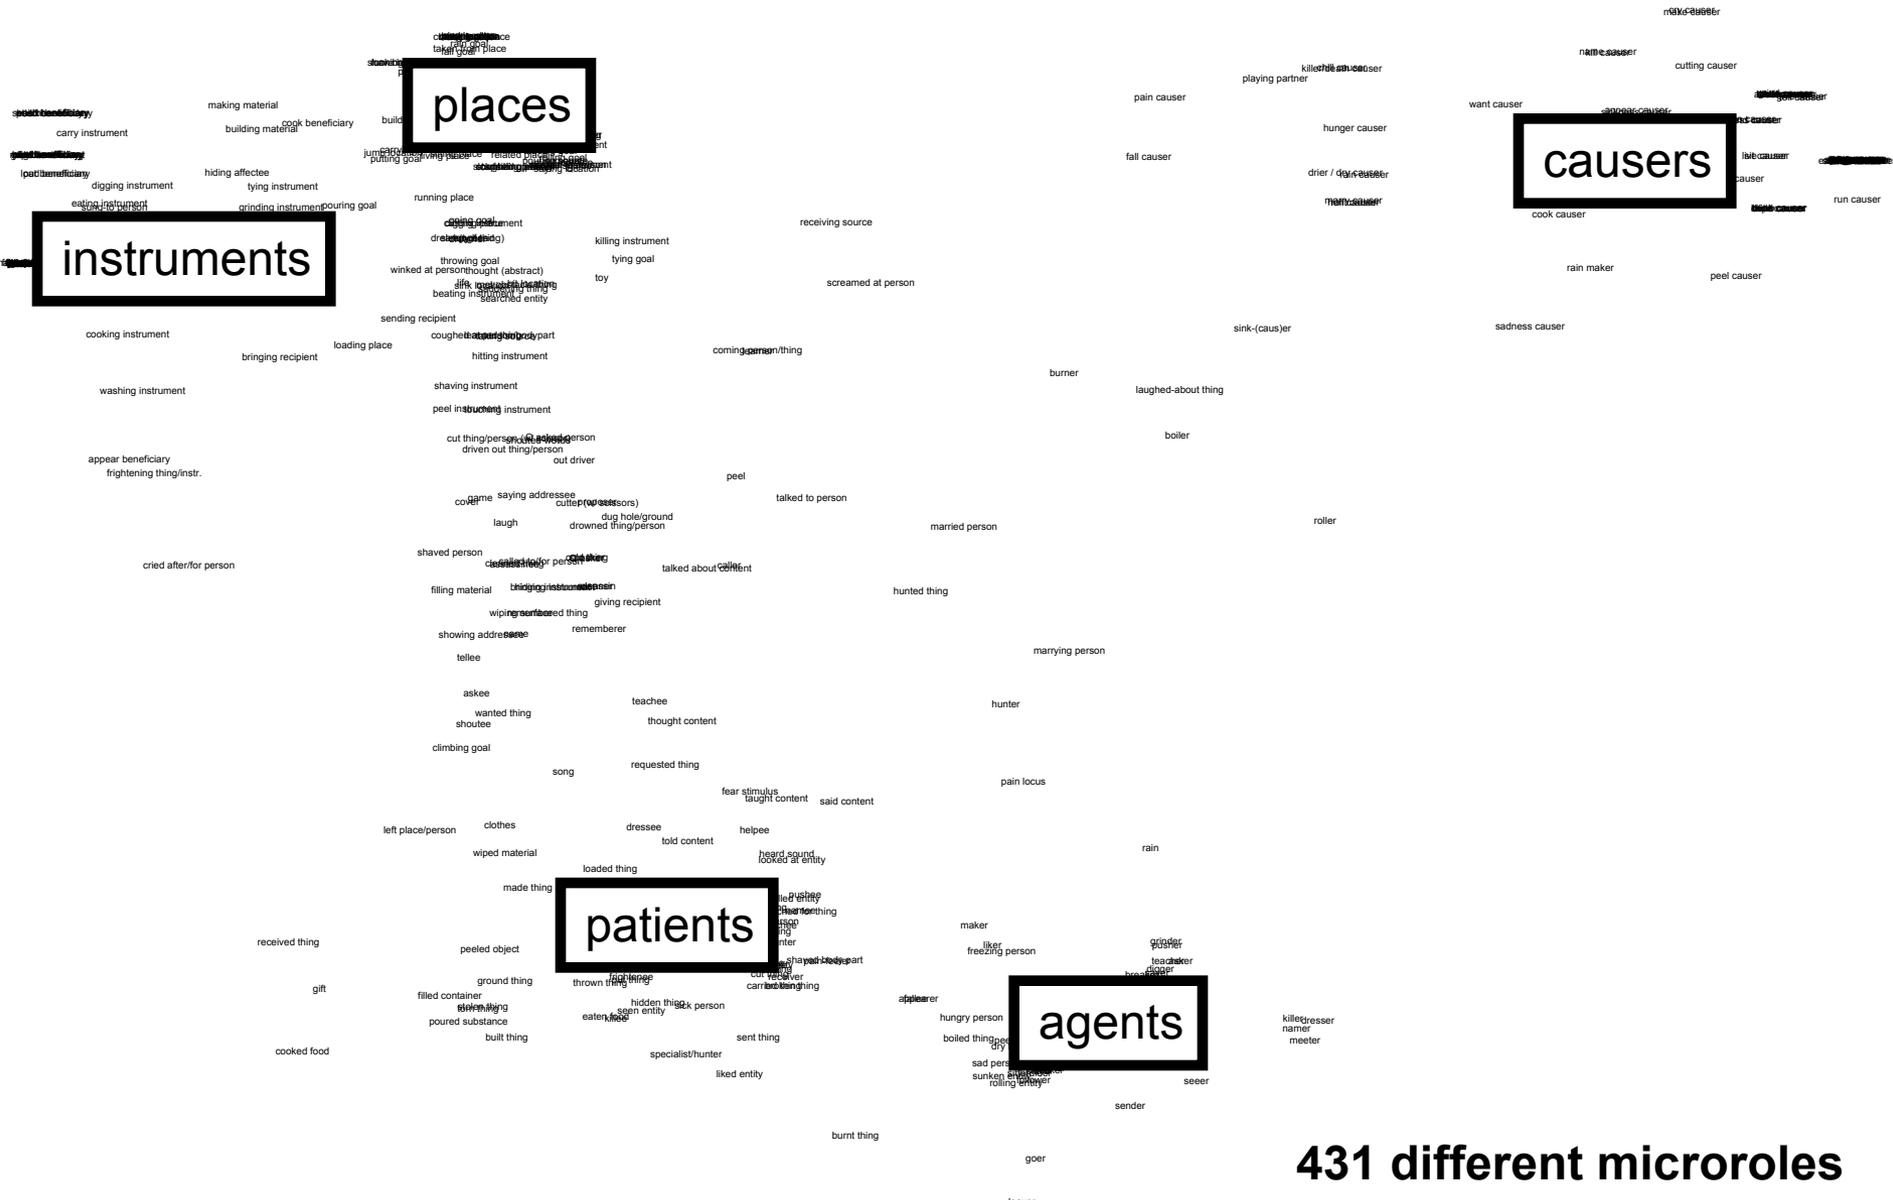

- How can we visualize linguistic diversity?
 - Show differences/similarities between languages
 - Basic idea: use a **constant “universal” base map**, and show each language as a separate overlay
 - **Optimize base map to highlight variation** among the languages to be compared
 - With sufficient data, suitable base maps approach an average (“universal”) language structure
 - Construction of a base map is similar to the semantic map approach from linguistic typology

Visualization

- Three aspects to be visualized:
 - Visualize **alternants** (“voices”) individually
 - Visualize **alternations** (“relations between alternants”)
 - Visualize **similarity between alternations** across all languages (“typology of alternations”)

1. Alternants

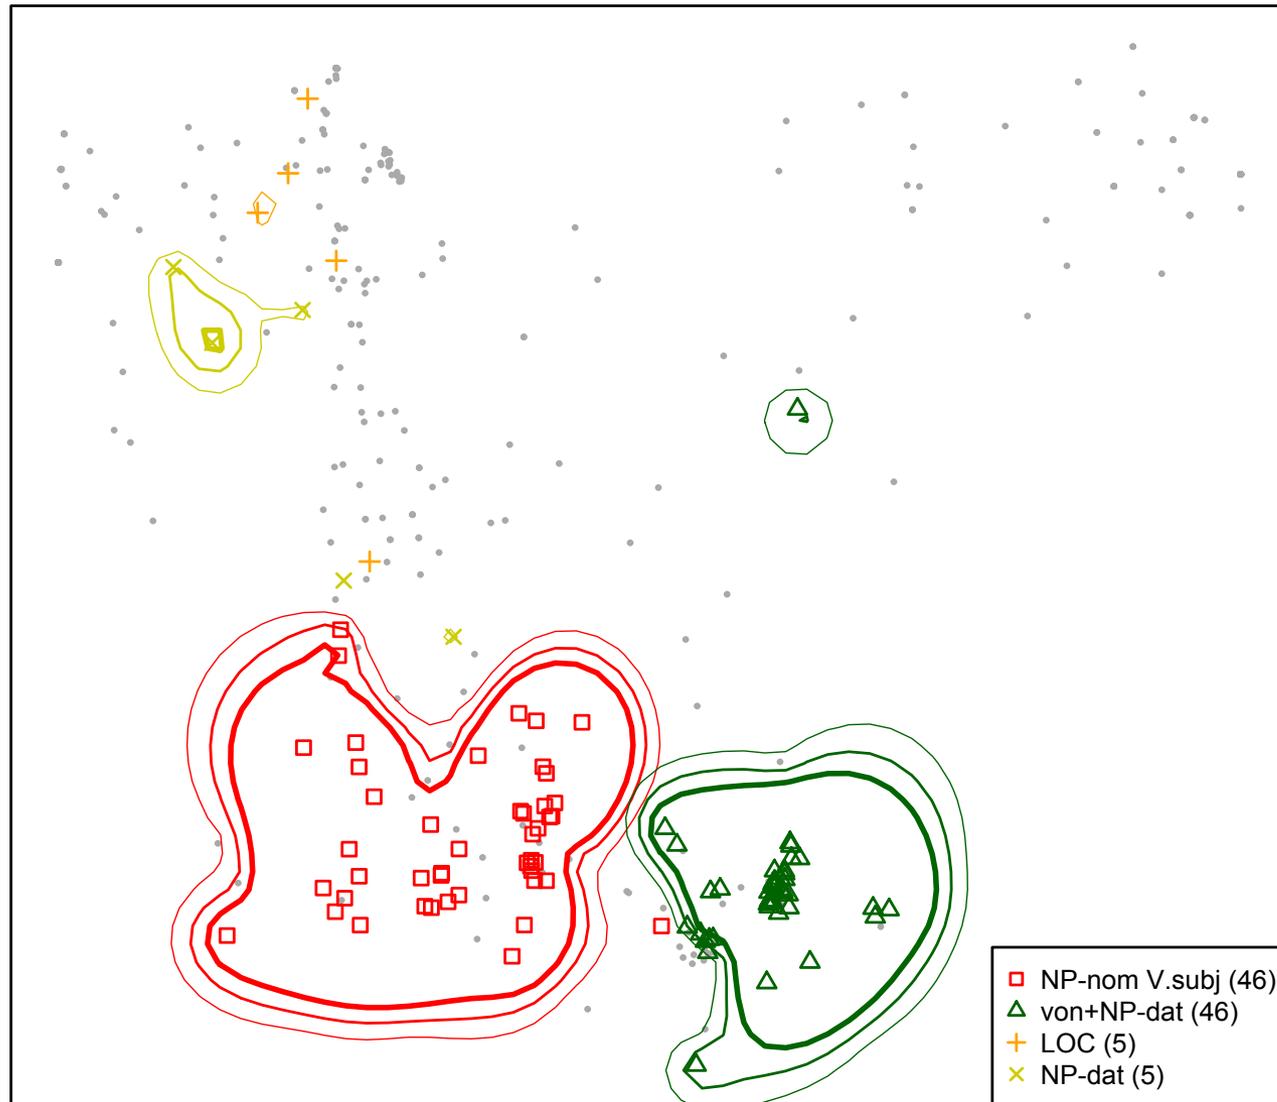

- An **alternant** (e.g. German Passive marked with *werden+Partizip II*) is characterized by a **mapping between microroles** (“lexical roles”) and **coding sets** (“language specific marking”).
 - HITTER, THROWER, etc (“agents”) are marked with prepositional phrase *von + NP + Dative case*
 - HIT THING, THROWN THING, etc (“patients”) are marked with *Nominative case + Verb inflection*
- For **base map**, use **microroles**, and **position** them **according to average co-expression**

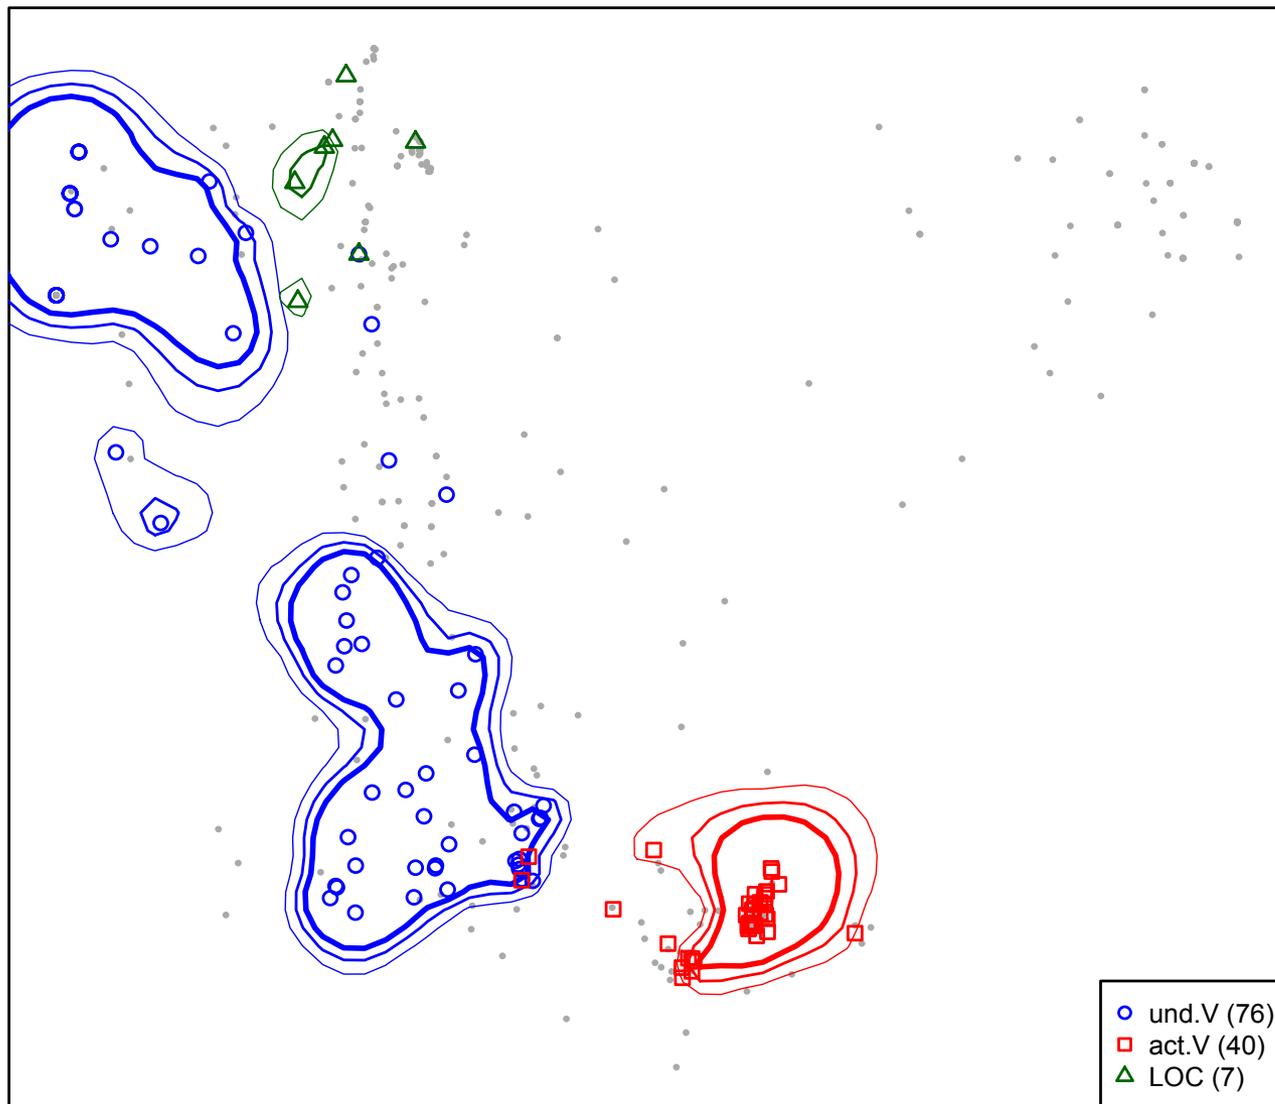

431 different microroles

Position determined by first two dimensions of singular vector decomposition of normalized microrole similarity measured by multilingual coexpression

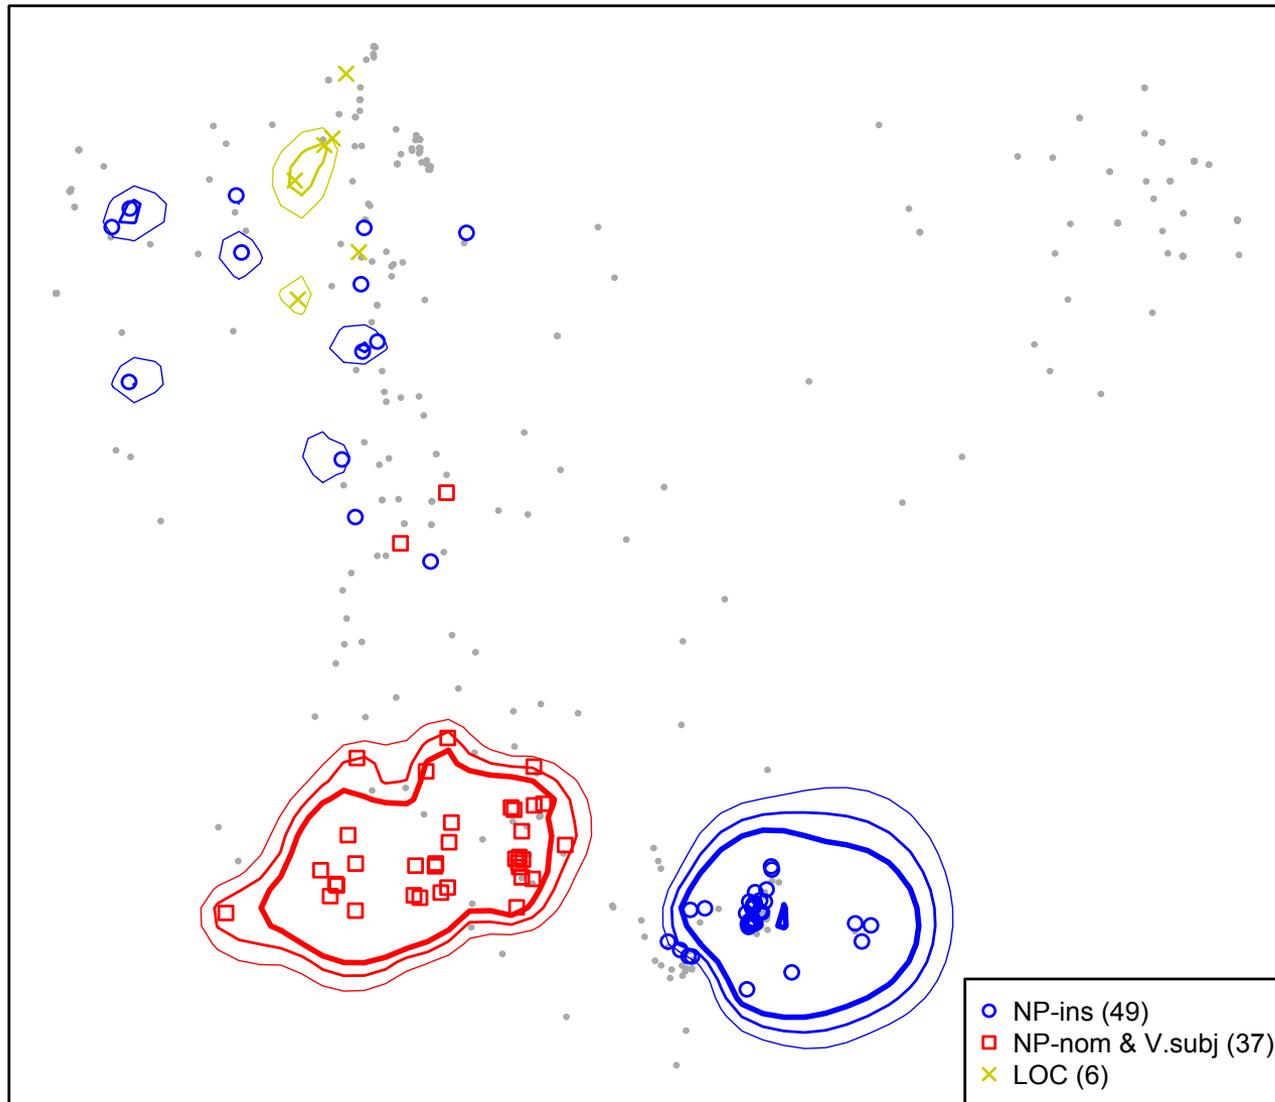

Passive (werden)_German

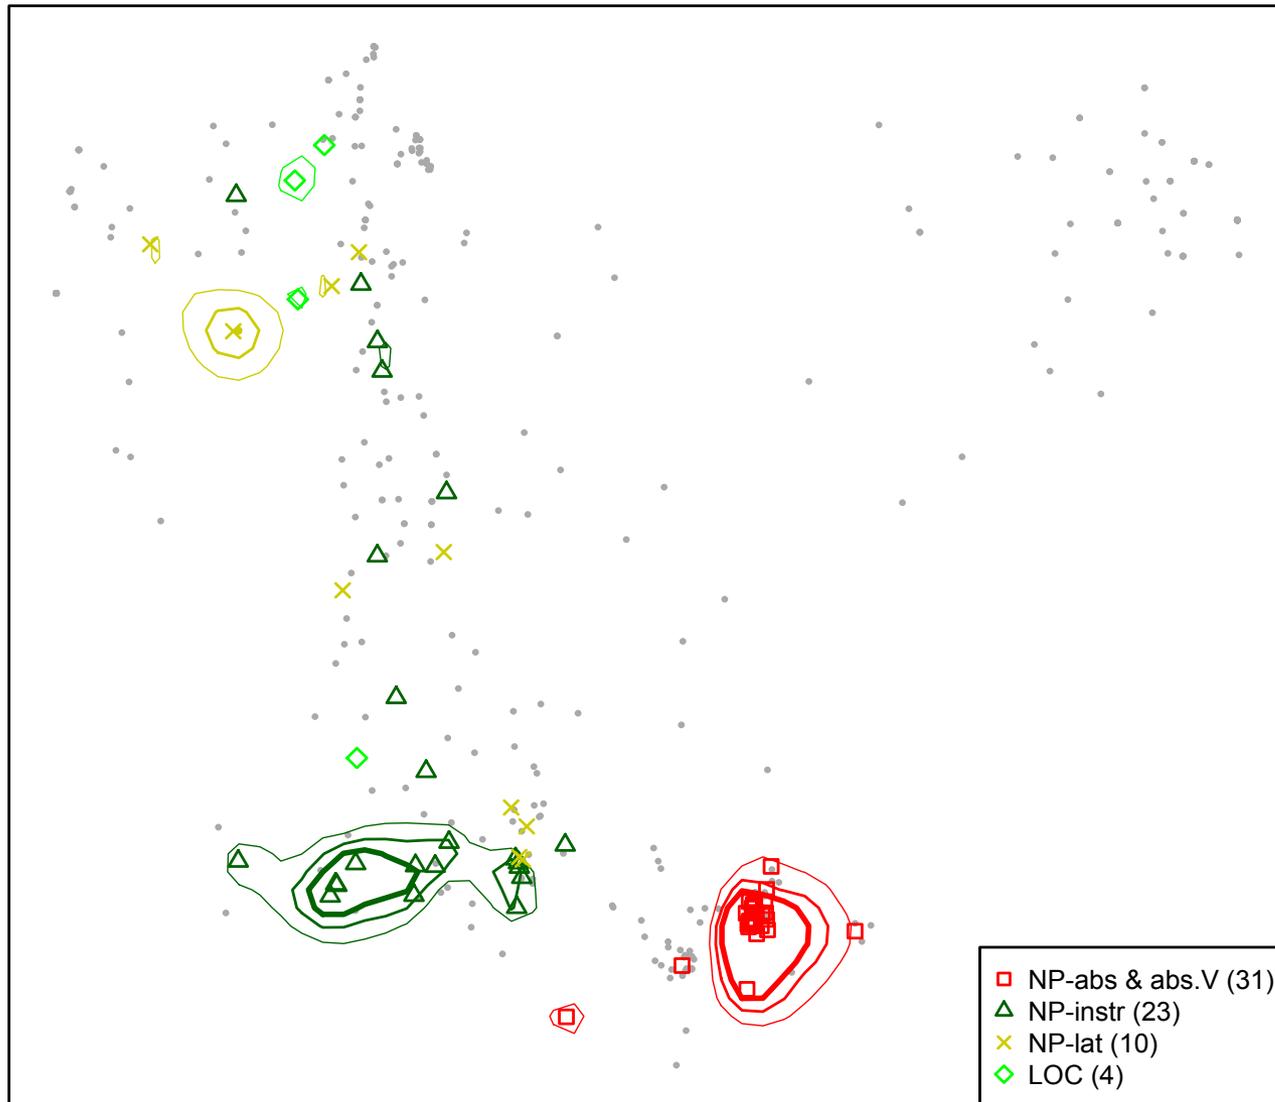

02 benefactive/possession of U (+gi)_Hoocak

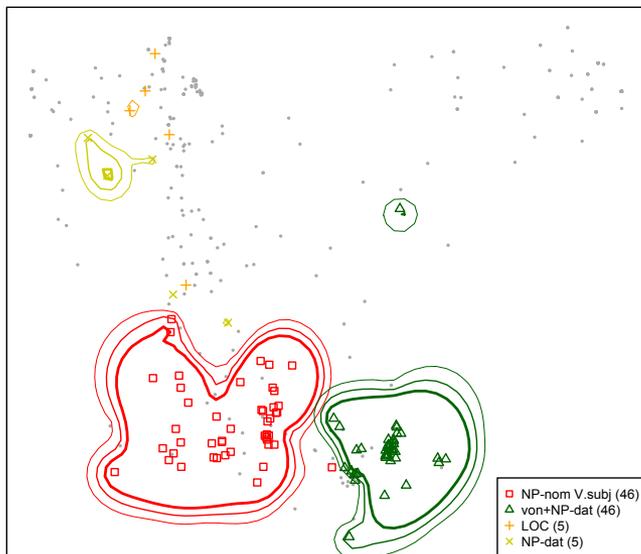

Participial Passive_Russian

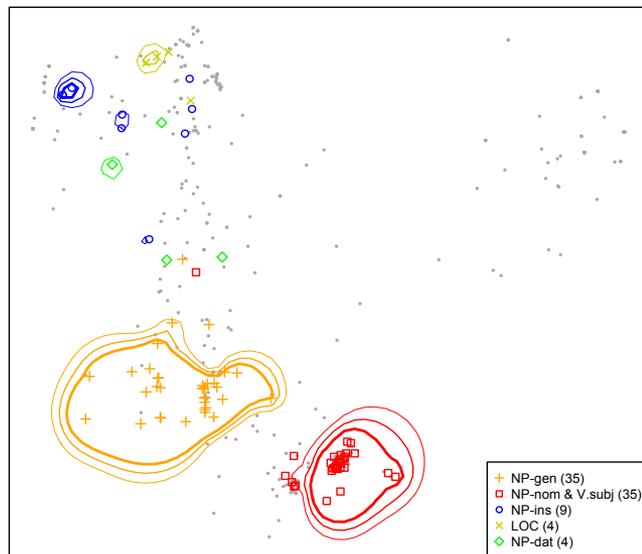

Antipassive Alternation_Bezhta

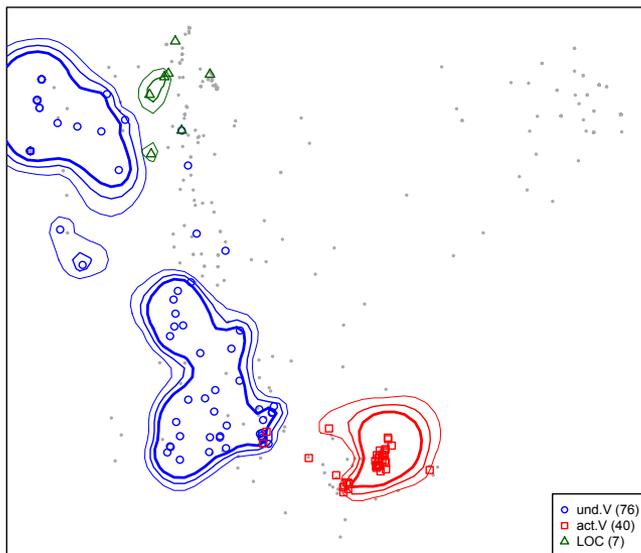

Passive (werden)_German

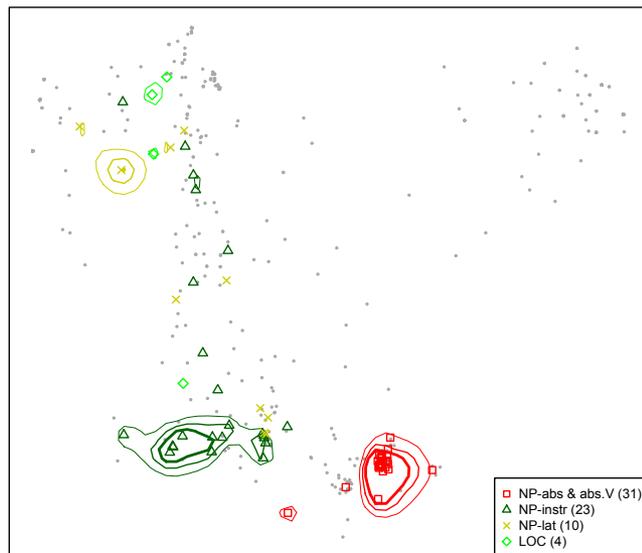

Negative Accusative-Genitive alternation_Russian

02 benefactive/possession of U (+gi)_Hooçak

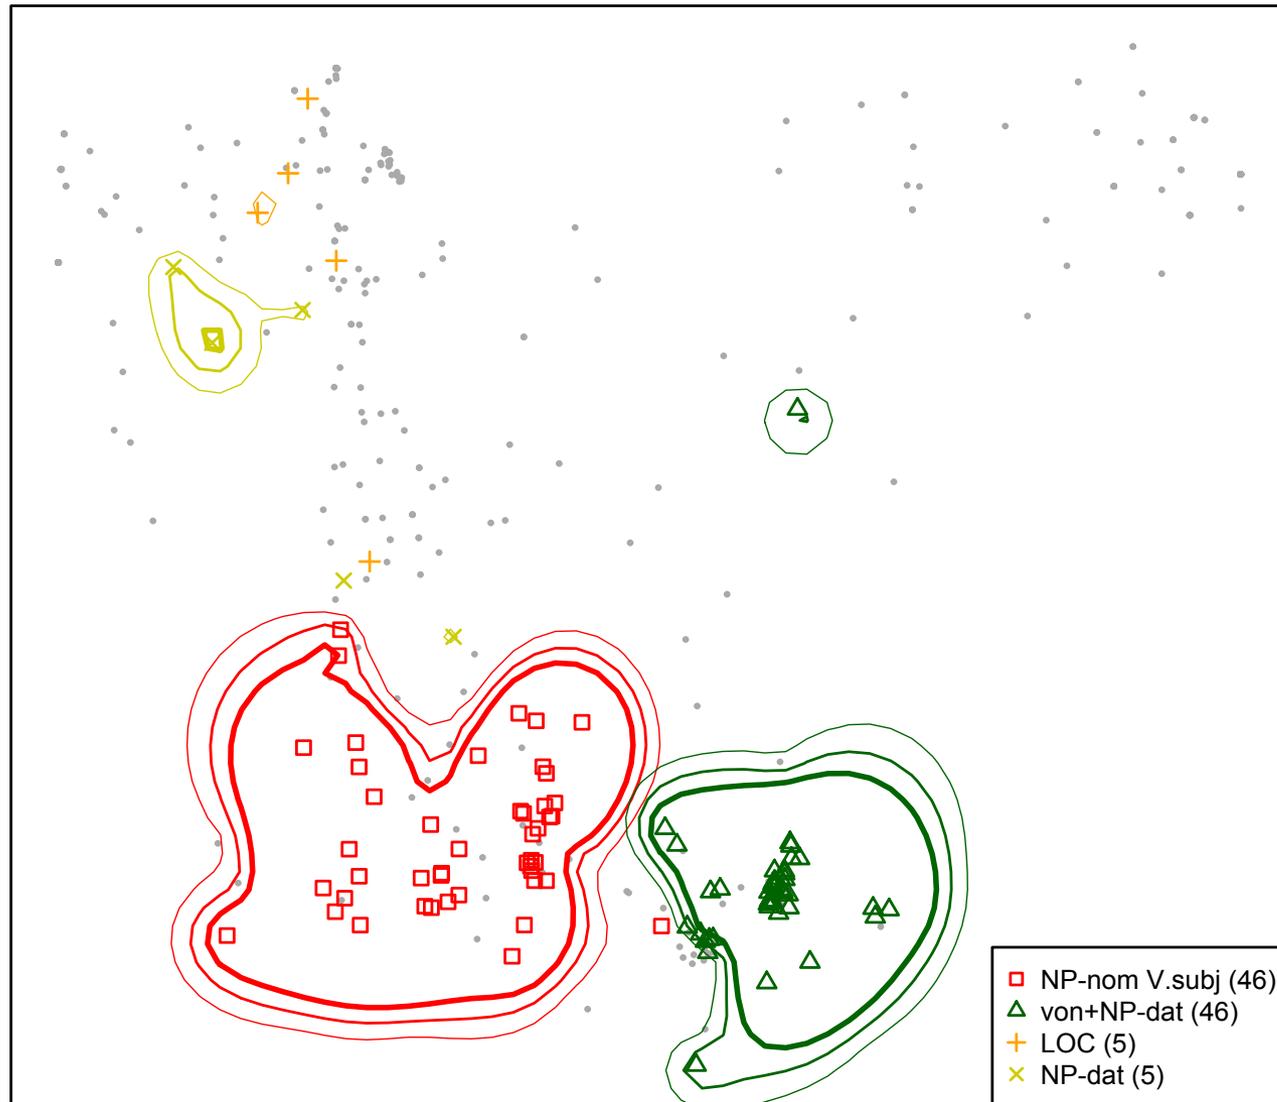

Antipassive Alternation_Bezhta

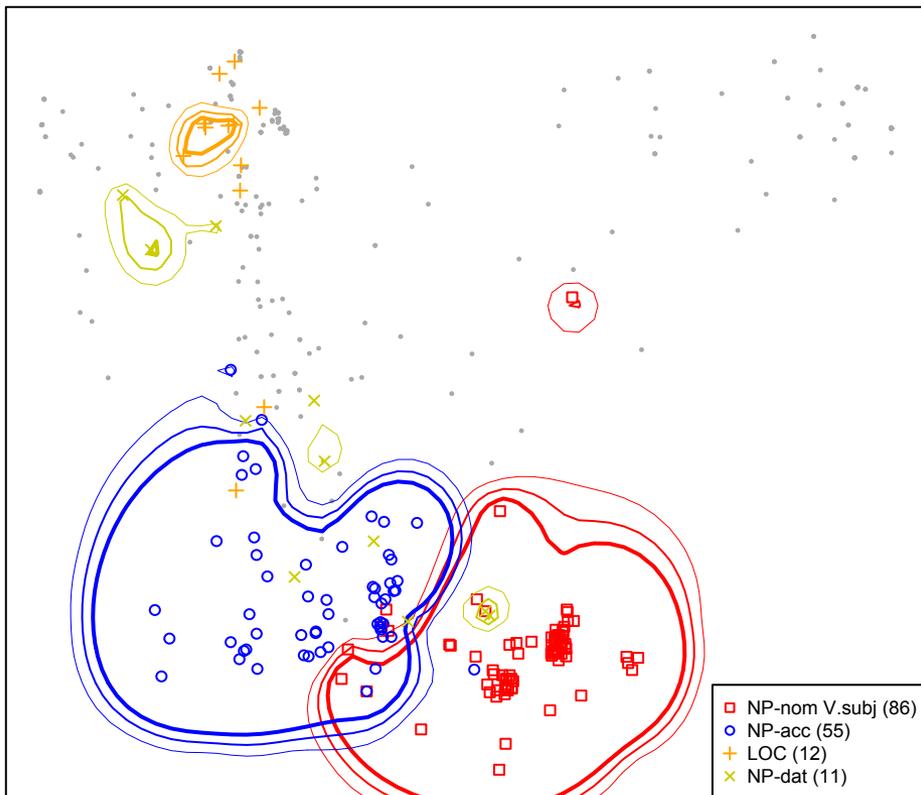

2. Alternations

- These visualizations **cannot be directly compared**
 - clusters of microroles are one important notion, but the **actual coding is also important**
 - but: **how to compare language-specific coding?**
e.g. what is the relation between
 - German *von+NP-dat*, Hoocak *act.V*, Russian *NP-ins*, Bezhta *NP-abs & abs.V*
- Our proposal: **compare alternant to ‘unmarked’ alternant of the same language**

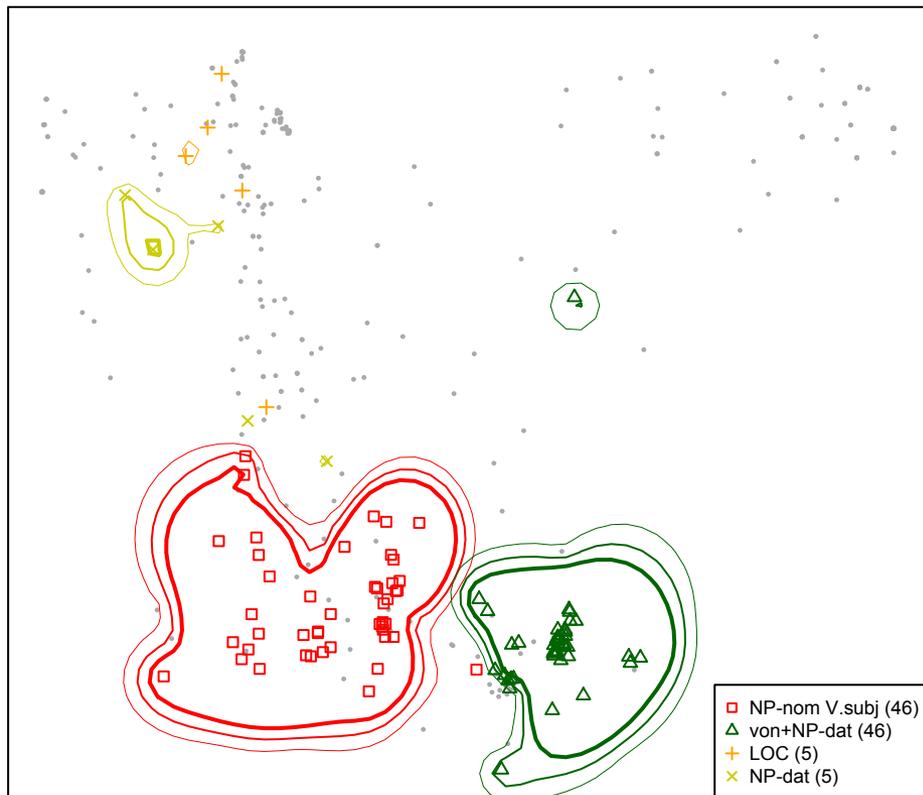

Passive (werden)_German

Difficult to interpret ...

Visualize Alternation

- Another 2-dimensional representation:
 - Use horizontal axis for ‘unmarked’ alternant
 - Use vertical axis for alternant of interest
 - Each axis shows all 431 roles, always in exactly the same order (one-dimensional base map)

**alternant
of interest**

caller
grind causer
hug causer
sing causer
rain maker
meeter
cutter
cooker
leaver
wanter
heard sound
built thing
wanted thing
cover
washing instrument
affliction/disease
carry beneficiary
asked person
book beneficiary
turn instrument
break location
longed for person
absent

**all 431 microroles in the same order
(not all shown due to space)**

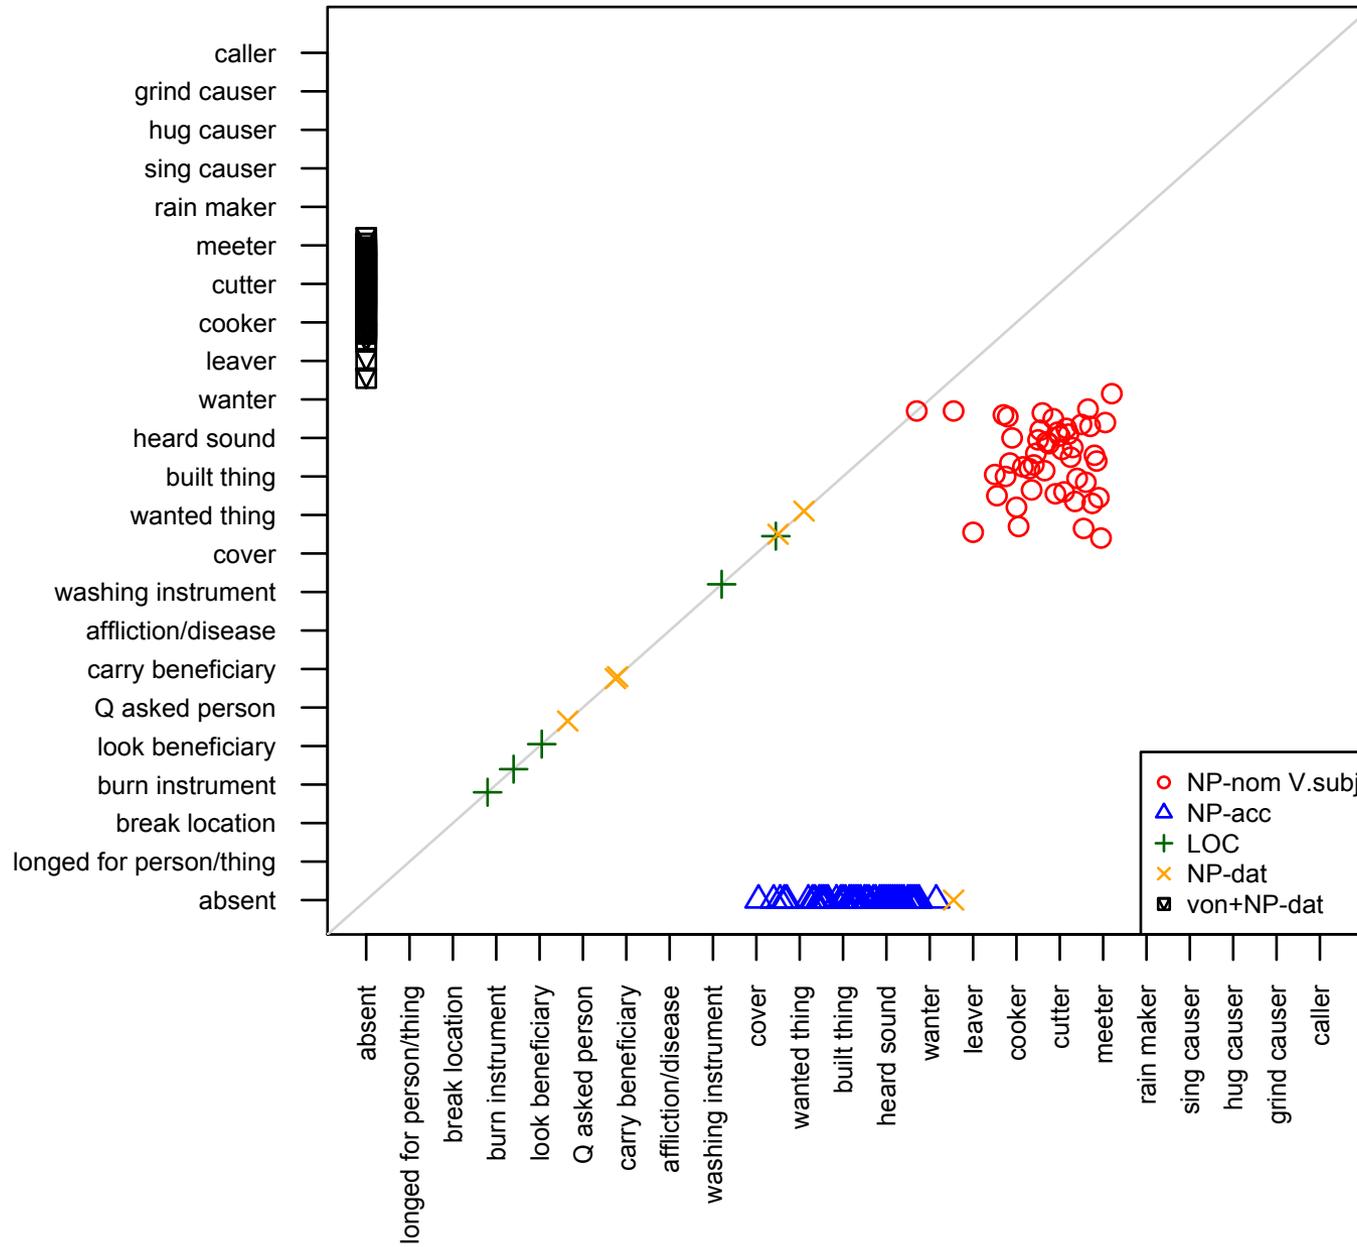

Linear order from Anti-Robinson
seriation by simulated annealing

**added
possibility
of absence**

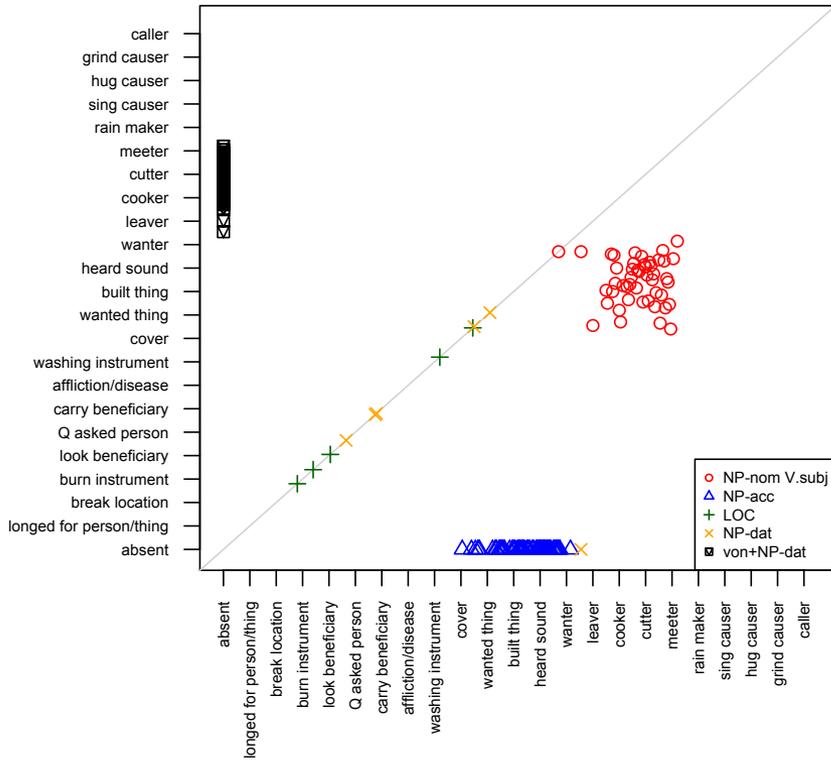

absent
longed for person
break location
turn instrument
book beneficiary
asked person
carry beneficiary
affliction/disease
washing instrument
cover
wanted thing
built thing
heard sound
wanter
leaver
cooker
cutter
meeter
rain maker
sing causer
hug causer
grind causer
caller

**'unmarked'
alternant**

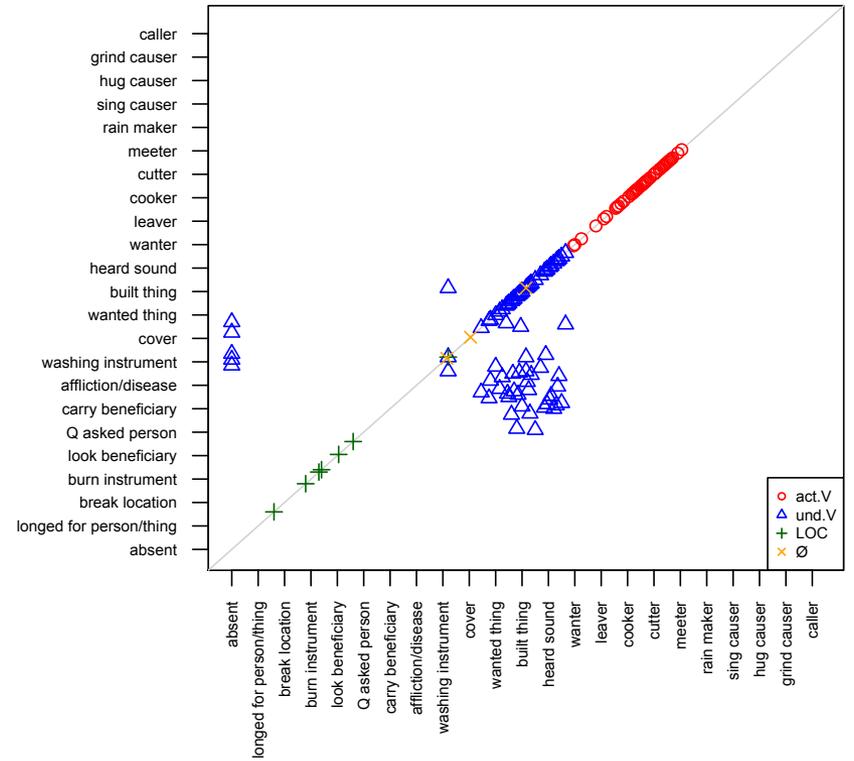

Passive (werden) from German

Passive (werden) from German

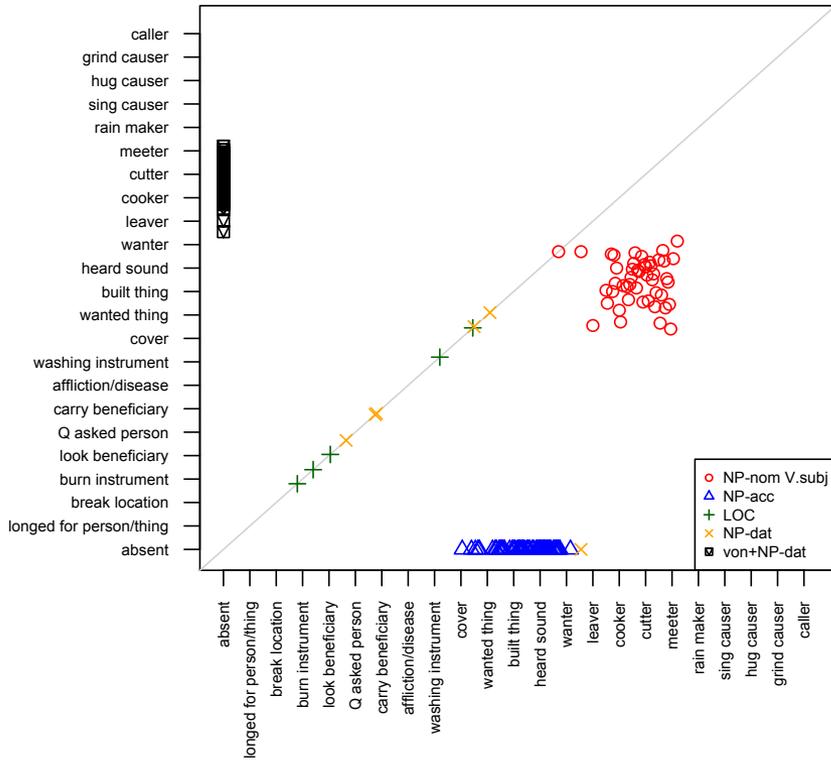

02 benefactive/possession of U (+gi)_Hoocak

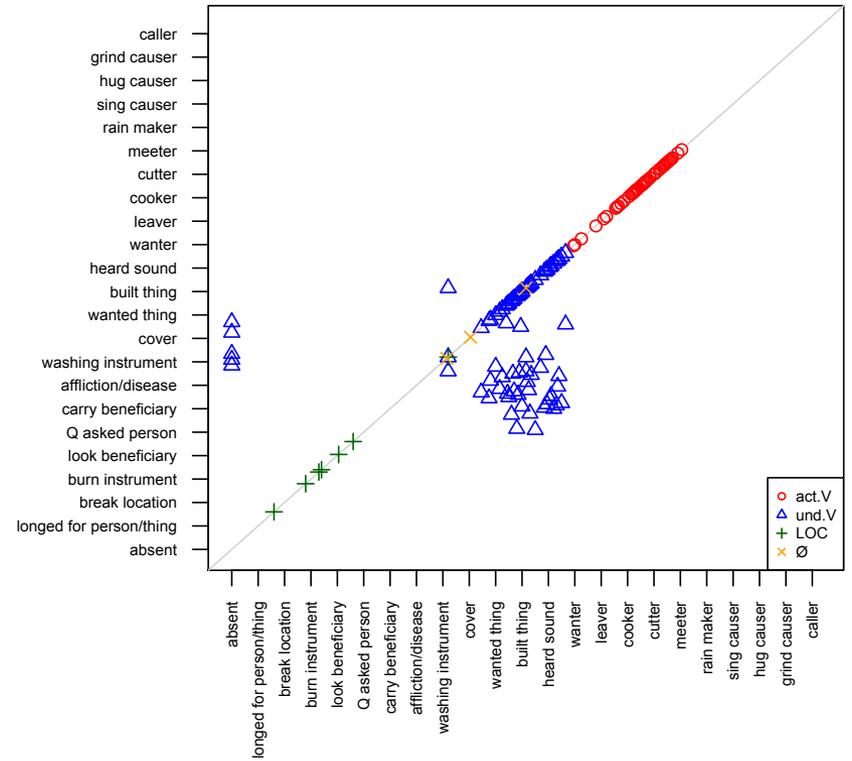

3. Typology of Alternations

- These visual representation of **Alternations** can directly be compared
- Note that the **color is not important** anymore!
- Simple measure of similarity between to alternations is the **number of overlapping dots**
- This similarity can be clustered to show typological structure

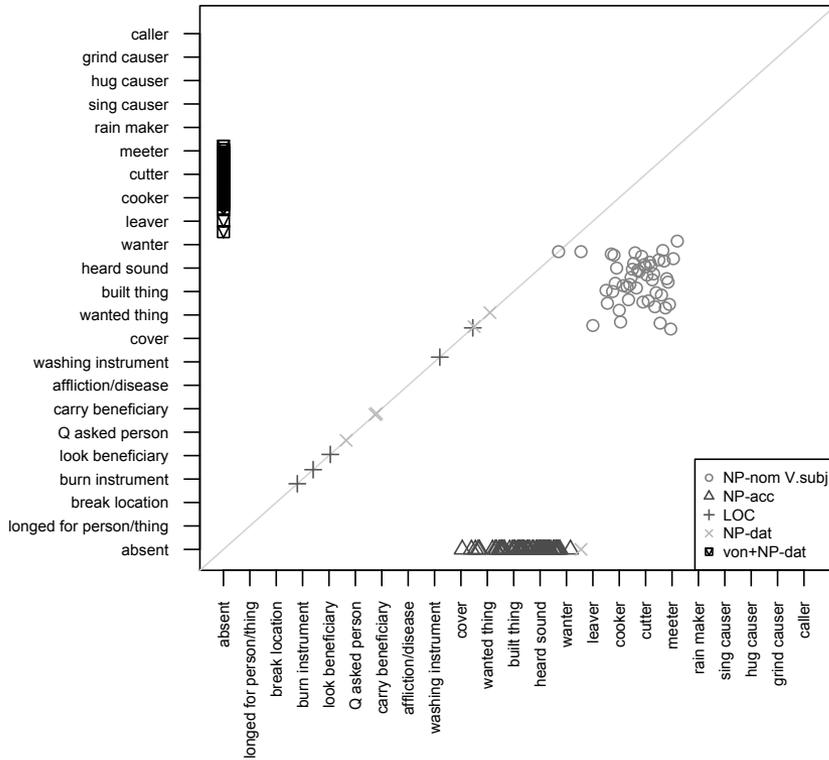

Passive (werden) from German

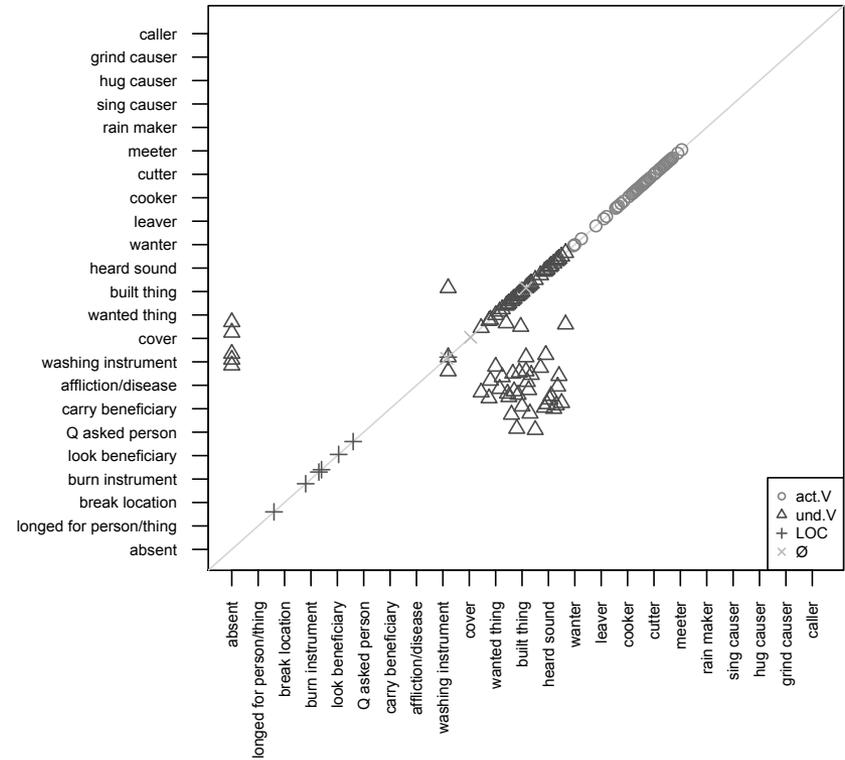

02 benefactive/possession of U (+gi)_Hoocak

Passive (werden) from German

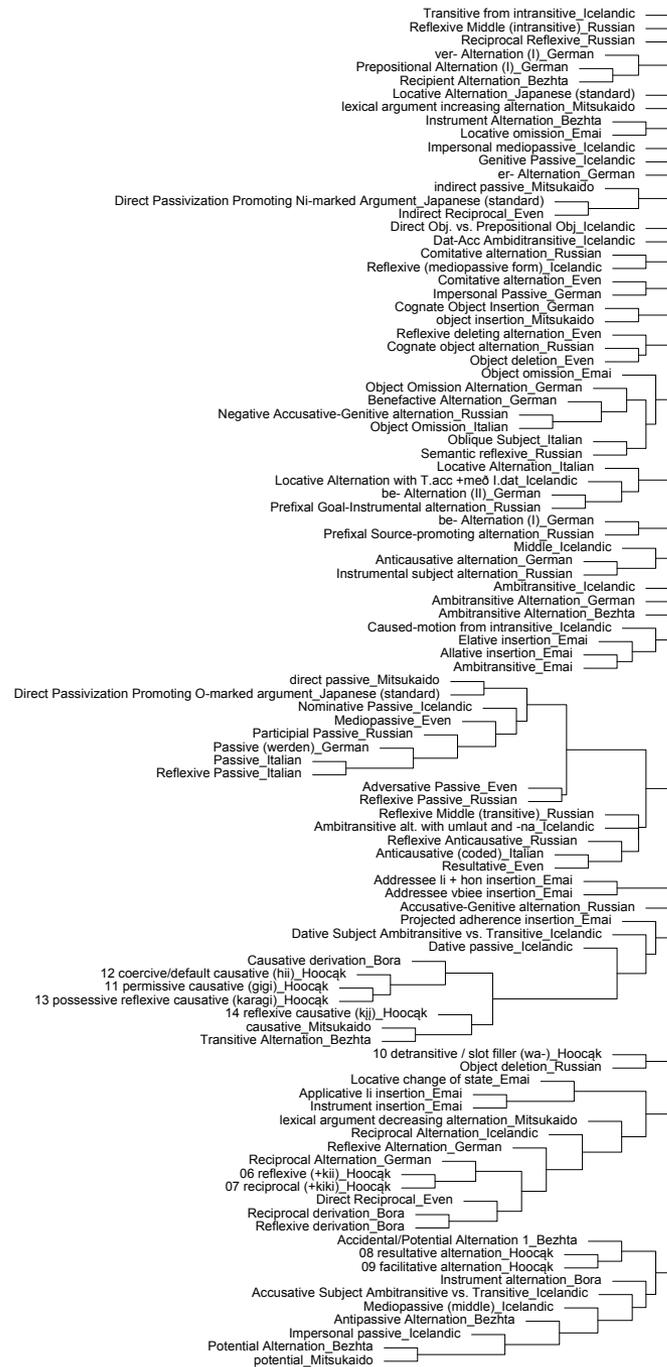

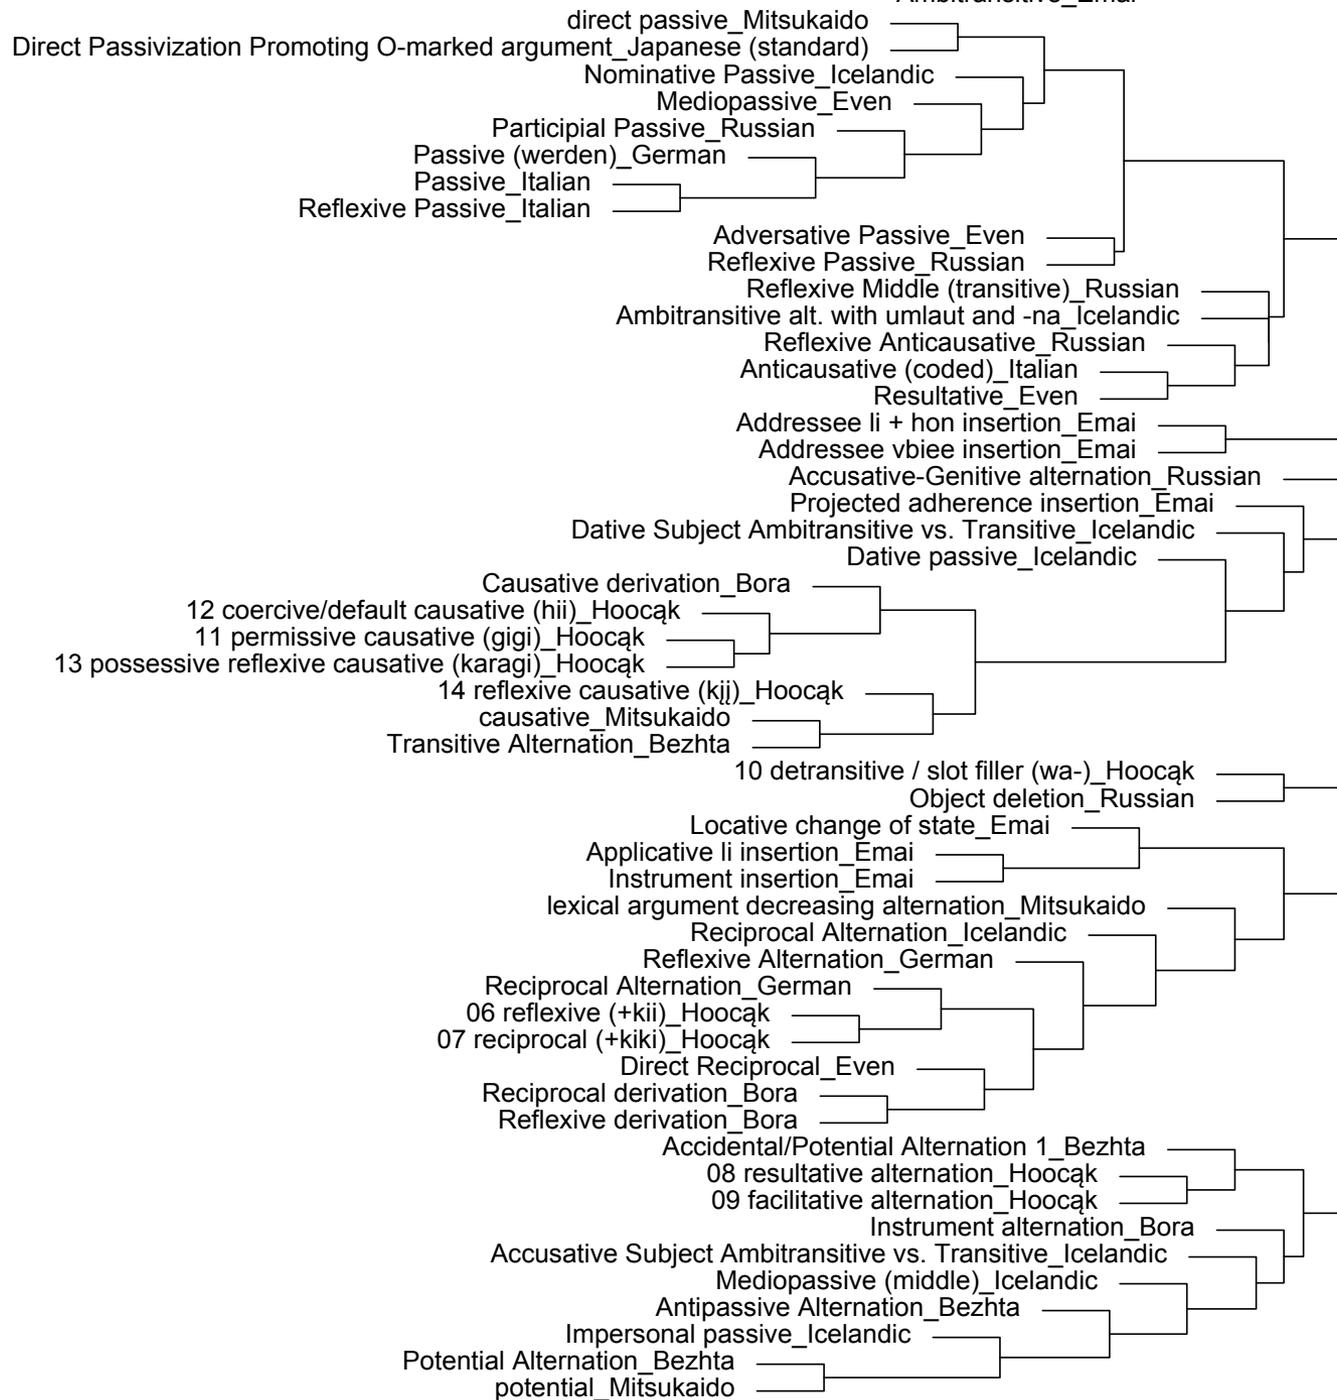

02 benefactive/possession of U (+gi)_Hoocak

How many points are shared?

That is a combination of how the roles are linked between unmarked and marked alternant, but also of the lexical distribution of an alternation

ssivization Promoting Ni-marked Argument from Japan

Summary

- Objective way of finding **alternation types**
- No typological comparison of language-specific coding necessary
- We would get exactly the same results if **all language-specific constructions were characterized by a random code**
- Likewise, **the actual meaning of the microroles is unimportant for this method**
- Based completely on **mapping between microroles and language-specific coding**
